

LAOS SECURITY ANALYSIS REPORT

AI-Assisted Open Source Intelligence Assessment

Analysis Period: November 05, 2026 - November 12, 2026

This report was produced using open-source intelligence analysis. The assessment is grounded in publicly available reporting and should be cross-referenced with primary sources. RSS feed articles are listed in the annex for reference.

Comprehensive Security Analysis Report: Laos (November 05 - November 12, 2026)

Executive Summary

During the period of November 05 to November 12, 2026, Laos's security landscape was primarily shaped by deepening military ties with China, evidenced by the operational status of a joint aviation facility, which has prompted regional scrutiny. Concurrently, Laos actively engaged in diplomatic efforts to enhance regional stability and combat transnational threats, notably strengthening border security cooperation with Myanmar. Domestically, the government continued its robust campaign against cybercrime and online fraud, underpinned by recent legislative amendments and operational centers. As Laos prepares for its graduation from Least Developed Country (LDC) status, its relationship with the European Union remains stable, focusing on sustainable development and digital transformation. The overall security posture reflects a nation navigating complex geopolitical dynamics while addressing persistent internal and border-related challenges.

Key Security Developments

- Military Activities and Exercises

The China-Laos Joint Support and Training Center and the China-Laos Friendship Aviation Academy at Ban Keun airport, approximately 50 kilometers north of Vientiane, have been operational since September 29, 2026. Satellite images from October 6, 2026, revealed the presence of eight K-8 light attack jets and more than two dozen military support vehicles at the site. This facility is intended to bolster Laos's air force pilot training and potentially influence its defense procurement towards Chinese equipment.

- Defense Policy and Strategic Shifts

On November 5, 2026, Vietnam's Foreign Ministry spokesperson, Phạm Thu Hằng, expressed the hope that cooperation between countries, specifically regarding the Chinese military facility in Laos, would adhere to international law and contribute positively to regional peace, security, stability, and prosperity. Separately, Thailand's Air Force chief, Air Chief Marshal Seksan Khantha, stated on October 12, 2026, that

Thailand is closely monitoring the Chinese-backed airbase in Laos and cautioned against excessive dependence on any single major power.

• Diplomatic Relations

Laos actively participated in the 11th Foreign Ministers' Meeting of the Mekong-Lancang Cooperation Framework in Beijing on November 4, 2026. During the meeting, Lao Foreign Minister Thongsavanh Phomvihane advocated for enhanced regional cooperation in water management, clean energy, and digital growth. On November 3, 2026, Chinese Foreign Minister Wang Yi met with Minister Phomvihane, reiterating their commitment to building an "all-weather China-Laos community with a shared future." Furthermore, Laos endorsed a National Action Plan for 2026-2030 on November 11, 2026, aimed at strengthening migration management and protecting migrant workers' rights.

• Security Incidents and Threats

The U.S. Department of State's Travel Advisory for Laos, updated November 2, 2026, designates Vientiane as a HIGH-threat location for crime affecting U.S. government interests. It also advises increased caution in Xaisomboun Province due to civil unrest and a persistent threat of violence. Transnational criminal organizations, narcotics traffickers, and armed bandit groups are reported to be active in border and transit corridors, particularly along the border with Burma, and in provinces such as Savannakhet, Xieng Khouang, and Vientiane.

• Maritime and Border Security

On November 4, 2026, Laos and Myanmar agreed to strengthen cooperation on border security and intensify efforts to combat cross-border crimes and other illicit activities. This agreement followed a courtesy call by Myanmar's Commander-in-Chief of Defence Services, General Ye Win Oo, to Lao Prime Minister Saleumxay Kommasith. All land border crossings between Laos and its neighboring countries are subject to overnight closures.

• Cybersecurity

Laos is actively strengthening its legal framework against cyber threats. The amended Law on Anti-Cybercrime was presented to the 2nd Ordinary Session of the 10th National Assembly on October 20, 2026. This revised legislation updates the 2015 Law on Anti-Computer Crime to address modern risks such as AI-generated scams, deepfakes, unauthorized access, data theft, disinformation, and cybercrime linked to fraudulent call centers. The law also provides for the establishment of a National Committee for Anti-Cybercrime and a 24-hour emergency response center.

• Unexploded Ordnance (UXO)

Unexploded ordnance from past conflicts continues to pose a significant threat across several provinces, including Savannakhet, Xieng Khouang, Salavan, Khammouane,

Sekong, Champasak, Houaphanh, Attapeu, Luang Prabang, and Vientiane, as well as along key routes like Route 7, Route 9, and Route 20. Laos is preparing to host an international cluster munitions conference to advance efforts in addressing the UXO threat.

Cyber Threat Landscape

Laos is actively confronting a dynamic cyber threat landscape, driven by its ongoing digital transformation initiatives. The government is strengthening its legal and operational capabilities to counter emerging threats. On October 20, 2026, the amended Law on Anti-Cybercrime was presented to the National Assembly, specifically addressing new risks such as AI-generated scams, deepfakes, unauthorized access to computer systems, data theft, disinformation, and cybercrime associated with fraudulent call centers. This legislative update reflects the rapid advancements in information and communications technology since the original 2015 law. The government plans to establish a National Committee for Anti-Cybercrime and a 24-hour emergency response center to coordinate prevention and response efforts at national and provincial levels.

The 2026 Law on Cybersecurity, officially published on March 20, 2026, introduced the concept of Critical National Information Infrastructure (CNII), classifying five core sectors vital to national security, public safety, and economic stability: national defense and public security, technology and communications, finance and banking, energy, and commerce, transport, and logistics. Entities within these sectors are subject to specific security obligations, including physical access controls, rigorous system monitoring, and oversight of third-party service providers. Laos has also intensified its crackdown on organized crime operating human trafficking networks and scam compounds, reporting almost 4,500 arrests in the first half of 2026. The Anti-Online Fraud Center, launched in December 2025, plays a crucial role in these efforts. Background: Naikon (China-linked) is a known threat actor.

Geopolitical Impact and Regional Dynamics

The recent developments in Laos carry significant geopolitical implications for regional stability and its relations with major powers. The operational status of the China-Laos Joint Support and Training Center at Ban Keun airport represents a notable expansion of China's military footprint in Southeast Asia, raising concerns among neighboring countries. Vietnam, on November 5, 2026, publicly urged adherence to international law regarding such cooperation, while Thailand's Air Force chief confirmed close surveillance of the facility, highlighting regional anxieties about major

power influence. This deepening military tie with China, alongside substantial Chinese infrastructure investments like the high-speed railway, reinforces Beijing's strategic leverage over Laos.

Laos's active participation in the Mekong-Lancang Cooperation Framework, including the 11th Foreign Ministers' Meeting on November 4, 2026, underscores its continued engagement with China and other riparian states on economic and development issues, particularly concerning shared water resources and digital growth. This engagement is crucial as Laos prepares for its graduation from Least Developed Country (LDC) status by November 24, 2026, a transition that will significantly impact its trade relations and economic resilience. The strengthened border security cooperation with Myanmar, agreed upon on November 4, 2026, reflects a regional effort to combat transnational crime, which is a shared concern among ASEAN members. The presence of armed groups resisting neighboring regimes in border areas further complicates regional security dynamics.

EU Relations and Implications

Laos's relations with the European Union remain stable, as assessed in August 2026. A key upcoming event is Laos's scheduled graduation from Least Developed Country (LDC) status on November 24, 2026. This transition is a significant focus of ongoing dialogues, with the 12th meeting of the Lao-EU joint working group on cooperation held on September 24, 2026, in Vientiane, specifically addressing the future partnership post-LDC graduation. The EU has demonstrated its commitment through the Team Europe Strategy 2021-2027, mobilizing an indicative 825 million euros for Laos. Future cooperation is set to concentrate on sustainable investment, private-sector development, trade, and green/digital transformation, aligning with the EU's Global Gateway strategy.

The security and cyber developments in Laos have implications for EU interests and cooperation. The EU's existing cooperation projects in sectors like Infrastructure & Transport, Development Cooperation, Trade & Investment, Education & Skills, and Climate & Environment are directly impacted by the stability and security environment. The focus on digital transformation in EU cooperation, including the SCOPE Digital – Copernicus Earth Observation Southeast Asia project, aligns with Laos's efforts to strengthen its cybersecurity framework and combat online fraud. However, the increasing military presence of China and regional security concerns could introduce complexities for EU-funded infrastructure and development projects, particularly those aimed at enhancing connectivity and trade. The ongoing efforts to combat cybercrime and online fraud are crucial for fostering a secure digital environment, which is vital for the success of EU digital cooperation initiatives and for attracting responsible European investment.

Military and Defense Analysis

Laos's military and defense posture during this period is significantly influenced by its deepening strategic partnership with China. The most prominent development is the operational status of the China-Laos Joint Support and Training Center and the China-Laos Friendship Aviation Academy at Ban Keun airport, 50 kilometers north of Vientiane, since September 29, 2026. This facility, which has been observed with eight K-8 light attack jets and military support vehicles, is explicitly aimed at strengthening Laos's air force pilot training. Analysts suggest this center could also steer future defense acquisitions towards Chinese equipment, further integrating Laos into China's defense industrial base.

The establishment of this facility is viewed by some as China's first full military base in Southeast Asia, indicative of Beijing's expanding regional influence. Laos's air force is relatively small, traditionally relying on Chinese and Russian-designed aircraft, with troops often requiring advanced training abroad. The new academy offers an opportunity for domestic training, potentially enhancing self-reliance in specific areas. While China states the facility is "not directed at any third party," its strategic location and the nature of the training raise regional security considerations, particularly for neighboring Vietnam and Thailand, who are closely monitoring developments. Beyond this, Laos also engaged in military diplomacy with Myanmar, with the Myanmar Military Chief visiting the Kaysone Phomvihane National Defense Academy on November 6, 2026, to strengthen regional military ties and border security cooperation.

Outlook and Forecast

In the short term (1-3 months), Laos is expected to continue its focus on economic resilience and the successful graduation from Least Developed Country (LDC) status by November 24, 2026. This will involve significant diplomatic and economic engagement to manage the transition and secure new trade and investment opportunities. Simultaneously, the deepening military and strategic ties with China, particularly concerning the Ban Keun aviation facility, will remain a central theme, potentially leading to further integration of defense capabilities and continued regional observation. Efforts to combat cybercrime and online fraud will intensify, driven by the recently amended Law on Anti-Cybercrime and the establishment of new operational centers.

Critical flashpoints and risk areas include the Laos-Myanmar border, which remains susceptible to transnational criminal organizations, narcotics traffickers, and armed

bandit groups. Xaisomboun Province continues to be a region of concern due to civil unrest and the threat of violence. The widespread presence of unexploded ordnance (UXO) across numerous provinces also poses an ongoing humanitarian and development risk. Regionally, the implications of China's expanding military presence in Laos could lead to subtle shifts in alliances and security postures among Southeast Asian nations.

Indicators to monitor include the operational scope and activities at the Ban Keun facility, any further reactions or diplomatic statements from neighboring countries like Vietnam and Thailand, and the progress of Laos's LDC graduation and subsequent economic adjustments. The effectiveness of the new cybercrime legislation and the Anti-Online Fraud Center in curbing illicit online activities will also be crucial indicators of domestic security.

Strategic recommendations for Laos include diversifying its international partnerships to balance external influences and enhance its strategic autonomy. Increased transparency regarding military cooperation agreements, particularly with major powers, could help alleviate regional anxieties. Continued and robust investment in UXO clearance programs is essential for humanitarian reasons and to unlock development potential in affected areas. Strengthening law enforcement capabilities, particularly in border regions, is vital to combat transnational crime and human trafficking effectively. Finally, sustained efforts to enhance cybersecurity infrastructure and expertise are paramount to protect critical national assets and foster a secure digital economy.
